Generate revenue from music sales, advertising, merchandise, or donations. Earn commissions with links that allow visitors to buy music. Sam Player Pro is a better choice: you need cloud backups over when your live stream goes down. You broadcast on a private network that is not connected to the Internet. You wish to stream directly to your SHOUTcast or Icecast servers without using the cloud as your central distribution platform. You don't care if you can and your own infrastructure. You mostly use the software as an advanced playback system and do not do any streaming. You broadcast via AM/FM via air (see Terrestrial Radio for details) you need to broadcast in a format that is not currently supported by the cloud, as one mp3PRO, Ogg, and Windows Media. Note: 30-day trial version. Free Trial 23.00 MB Download Sam Player - Professional Internet Player DJ Software. Much more software than just DJ systems, providing a complete radio automation solution - the radio station in a box. Highlights of the program: Providing professional sound with crossfading, killer slots, matching beats, volume normalization and 5-band compressors/limiter Smartly handles large media libraries - sorting them into easy-to-manage Categories Advanced Logic rotating playlists and timings will make your station sound professional - even if you're not in front of your computer Advanced streaming coding - unable to encode MP3, mp3PRO, WM9 and Ogg Support for all major streaming servers, including SHOUTcast, Live365, IceCast, Windows Media and P2P Streamer View statistics in real-time: know how many listeners are connected at any time Interfaces directly with your website to allow automated song requests and improve the experience of your listeners by providing them with Artist , Title, Album, Cover art and other information on songs being played Generate additional revenue with Buy CD links If you own an online radio station or podcast, you will need an application that will be able to play your media content on your station efficiently without breaking down in transmission. The software is a comprehensive software that is specifically designed to provide you with a broadcast solution for your internet radio station. The program provides support for various media formats that include WMA, CDA, MP3, FLC and OGG. It also offers support for servers such as SHOUTcast. You can send messages to your audience via microphone, increase/decrease volume or adjust the sound quality. You can view the number of audiences you see through listener statistics and report performance, events scheduled as well as obtain audience requests. From the playlist panel, you can add new contents to different categories by clicking the Add button. The app allows you to upload files or libraries from your local storage, M3U, PLS or ASX playlists and incoming URL links. You can see songs I've played from 'Date' and songs that are scheduled to be played after the 'Queue' section. As a result, the program has all the functions and features you need to broadcast media content on your internet radio station. It is part of the audio mixer category and is licensed as a shareware for Windows 32-bit and The platform and can be used as a free trial until the trial period will end. The SAM player demo is available to all software users as a free download with potential limitations compared to the full version. Version.
